Testimonials for Immunocal and Cancer

Brian's Battle by Karen O'Handley - Ewing's Sarcoma/PNET

Wouldn't you agree that when someone you love is very ill, you would search high and low to find something to help them regain their health? Most assuredly you would. And when you find that "something" that helps your loved one, wouldn't you want others to know about it? Without a doubt! My name is Karen O'Handley, and I have been asked by many people to write this story about my son, because it has given hope to those going through their own difficult health challenges.

In May of 2002 I took my 19 year old son Brian to our primary physician Dr. Raymond Dann because of a **swollen, area** on the right side of his back. Brian thought he might have pulled a muscle while playing baseball, however the swelling wasn't going down. Since the location of the swelling also involved the underside of his right arm, I was hoping another possibility might be a **swollen lymph gland**. Upon examining Brian, Dr. Dann immediately became concerned about the look and feel of the area, so he ordered a CT scan to be performed the next morning. Four days later Brian and I went back for the results.

Imagine my complete shock and disbelief when we were told that the CT scan showed the following: **a large tumor** in Brian's right scapula (shoulder blade), as well as a large mass under his right arm; a growth in the sternum bone in his chest that had already damaged the bone; a growth over his heart the size of a small fist; and multiple metastases (nodules) in BOTH of his lungs. It was impossible for me to comprehend that my only child had stage IV cancer, because at 6'2" with an athletic build he looked as healthy as a horse, and he was not in any pain. Plus, he had never smoked or abused alcohol or drugs, and he lived a morally clean lifestyle. He was also very active with baseball, basketball and football, and he played the drums and the guitar. I can only imagine the thoughts that were racing through Brian's mind when he heard the news! I tried my best to remain strong for my son's sake, but the tears flowed down my face as I drove us home from the doctor's office.

Later that same week Brian had a full body bone scan and a biopsy was performed on the mass under his right arm. A few days later we were given the diagnosis: Ewing's Sarcoma/PNET, a rare and very aggressive cancer that most often strikes young children. It is usually a bone cancer, however it can be soft tissue, and in Brian's case it was both. Naturally, I knew nothing about this cancer, in fact I had never heard of it -- but I had to quickly educate myself. This was an emotionally difficult thing to do, because everything I read was absolutely horrifying, as well as depressing. There is a very low survival rate with Ewing's and it is very difficult to stop this cancer because it is so resistant to treatment. In some cases, the tumors are known to double in size daily.

Next, armed with all Brian's test results, we visited 2 oncologists, a surgeon and a radiologist to see what could be done to help my son. However, because of the spread of the cancer, at that point surgery and/or radiation were out of the question. The only treatment that could be recommended was mega, doses of chemo; however the possible side effects from the treatment were horrific. We were told that any of the following could happen: brain hemorrhaging, collapsed veins, spontaneous internal bleeding, heart damage, liver damage, kidney damage, bladder damage, sterility, and severe deep depression. The question rolling around in my mind after hearing the list of possible side effects was: Which was the lesser of two evils -- the aggressive cancer or the toxic treatment? Additionally, we were told he would need blood transfusions every 3 - 4 weeks due to the damage to his blood supply from the chemo. All of this was unacceptable to me, on many levels. Also, it didn't make sense to fill my son with toxic chemicals when he already had a severely weakened immune system -- why else would he have cancer? I decided there had to be another answer "out there", and that I had to build up Brian's immune system before he could undergo such a dangerous medical treatment. For the next 7 months we visited many natural practitioners, herbalists and nutritionists,

as well as a renowned cancer clinic in Mexico. With the help and support of our loving friends, donations were collected and several fund raisers were held in order to raise the many thousands of dollars that had to be spent in order to use these types of natural supplements and treatments, because our health insurance covered none of it. Unfortunately, these natural treatments were not strong enough to stop Ewing's Sarcoma. In fact, the most visible sign of the cancer -- the mass under Brian's arm -- was rapidly growing larger.

It had grown so huge that he could no longer put his arm down by his side, and his skin covering the mass had deep purple stretch marks because of the rapid growth. Outwardly, the mass had wrapped around to the front of his chest, and was pushing in the right side of his chest. Inwardly, it was wrapping around his lung. The bones of his right shoulder and the top of his arm were pulled out of alignment because of the expansion of the mass, so his right shoulder sloped downward and became 2-3 inches wider than the left shoulder. His upper body was noticeably deformed. He was now also in a lot of physical pain, as well as emotional pain. (Visualize slicing a football lengthwise, placing one of those halves under your arm, contouring it to your shoulder blade to wrap around to the front of your chest. Imagine how you would feel, and how Brian must have felt.) At this point, the only thing my son wanted to do was close his eyes and go to sleep in death. I was at my wit's end, because it was obvious nothing natural was going to stop this monster growing inside him. I knew he would have to undergo the mega doses of chemo -- but what was

going to protect his body from the horrific side effects? I had spent many sleepless nights worrying about my son, but this night in particular was very difficult. I felt as though Brian was a lamb going to the slaughter, and I beseeched God with many tears that night to show me what to do for my son, and send me to the right person to help him.

The next morning at 8:00 the phone rang, and it was a woman named Betty Murray -- a friend of a friend. She had heard about Brian from one of my closest friends, Joyce Keenan, and about how I was searching for something to help his immune system. She called to tell me about a product with a strange name: **IMMUNOCAL**. I remembered my tearful prayer the night before, and I knew then and there that I was supposed to listen to what she had to say. Betty told me right away that she didn't know a lot about Immunocal because she was a new distributor and just learning about the product, so she was smart enough to get an expert on the phone to talk to me.

This expert is an Independent Entrepreneur with Immunotec Research Ltd., the developers of Immunocal. He travels around the U.S. as a spokesperson for the company conducting health seminars to teach people about a simply wonderful molecule in each cell of our body, called "glutathione". He helped me to understand what role glutathione plays in the cells: that it's the "master antioxidant", an immune system booster, and a detoxifier. He explained that Immunocal is a biologically active, undenatured whey protein isolate which supplies the body with the "precursors", or building blocks, for the cells to make more of their own supply of this precious antioxidant. In the case of someone with cancer, the tumors themselves are very high in glutathione, which contributes to their rapid growth and explains why they are often resistant to even chemo and radiation. A very interesting thing happens, however, when a cancer patient eats Immunocal daily. The healthy cells INCREASE their supply of glutathione, while the tumor cells become DEPLETED in glutathione! This phenomenon is called "negative feedback inhibition", and it is extremely useful for treating cancer. It was clear to me this was exactly what I had been looking for over the past 7 months -- something non-toxic and natural to build Brian's immune system and also protect his organs and blood supply while undergoing the rigors of chemo! The icing on the cake was when I was told that Immunocal is in The Physician's Desk Reference as well as The Pharmacist's Redbook, and it also has a method-of-use patent as an "anti-cancer therapeutic agent" (as well as 5 other method-of-use patents in other applications). And there is over 20 years of research on Immunocal, along with multitudes of clinical studies. I wanted Brian on it immediately, and I wanted to take it too, because it's NOT just for cancer patients. We ALL need to be eating Immunocal -- including children -- because of the polluted environment we live in. The water we drink, the food we eat, the air we breathe -- our bodies are rapidly breaking down from all the toxins and the stresses of life in this system of things. Immunocal is "food for the immune system", and gives us the help we need. I immediately put Brian on the recommended dose for cancer patients -- 4 packs of Immunocal daily. Yet I also wanted to take it, and I wanted us to take some of the other unique products that Immunotec Research makes. But where was all the money going to come from? I was, and still am, a single parent, and I needed to be home with my son monitoring his recovery, yet I had to find a way to support both of us and pay for all these products. I definitely had "a big-enough WHY" for needing the freedom to work from home, and I saw that I could be financially rewarded for telling people about the importance of Immunocal for them and their loved ones. So, in my typical style, I "dove right in" and started my first home-based business in Dec.'02, even though I had no office equipment and I had never done network marketing before. That did not stop me, however, because I knew I would learn the business as I went along, and I had faith that the office equipment would somehow materialize ... which it did!

To make a VERY long story a little bit shorter: Brian went through 4 months of the mega doses of chemo beginning in March '03, under the supervision of oncologist Dr. Leo Orr. The only side effect he experienced was total hair loss, which rapidly grew back when chemo ended. He maintained a good appetite, and he gained 10 pounds. Blood transfusions were never suggested, and he never became anemic. When his white blood cell count would drop as expected after each round of chemo, he simply had to give himself Neupogen shots in the thigh for a few days, and the

The people giving product or business opportunity testimonials on our web site or on other Immunotec materials reflect the actual experience of each individual, are anecdotal only, and may be atypical. Please consult your health practitioner for proper diagnosis or treatment of any serious condition which may affect you.

WBCs would go up again. The huge mass under his arm responded very quickly to the chemo by softening, and then slowly it began to shrink. When the chemo protocol was completed, another CT scan was performed so a comparison could be made to the original one done in May '02. Dr. Orr gave us a lot of positive news: the metastases (nodules) in the lungs were shrinking, and there weren't as many; the mass over his heart was completely GONE, and the heart returned to it's normal size (in the previous scan it was noticeably swollen); the cancer in the sternum was GONE, and the damaged bone healed in and was smooth in appearance (even Dr. Orr was amazed at that, because chemo does not HEAL anything -- it is designed to destroy -- yet Brian's body healed itself while he was on chemo). The mass under his arm was shrinking and the primary tumor in his shoulder blade was a little bit smaller, so the green light was given for Brian to begin 6 weeks of radiation treatments, 5 days per week. (NOTE: I also give credit for the recovery of Brian's bones to another unique product that Immunotec Research makes called PURE MILK CALCIUM, which we take everyday.) Radiation therapy began a few weeks later under the supervision of Dr. Eva Lean and Dr. David Hodgens, and the targeted area was the right shoulder blade and the mass under his arm. I was expecting some kind of nasty side effects because I had read a lot about radiation complications. But the only thing Brian experienced was bright pink skin, which looked like a sun burn. It never hurt, nor did it require any cream or lotion. While undergoing this treatment the mass under his arm got MUCH smaller -- it was obvious the cancer cells were dying quickly, and not resistant at all. (I continued giving him 4 packs daily of Immunocal throughout all of the radiation treatment - - in fact he's never been off of it since the first day I gave it to him.)

New tests were needed to determine the effectiveness of the radiation therapy. Oncology surgeon Dr. William Bowman had to determine if surgery was necessary to remove any remains of the tumor from the shoulder blade. We waited the required 6 weeks after radiation before having more tests, and then Brian had a full body bone scan and an MRI of his upper body in Dec.'03. When the results came in, we received fabulous news from Dr. Bowman ... there is NO CANCER in any of Brian's bones, including his shoulder blade, which meant he did not need surgery! Next we received the MRI results and more great news ... the metastases are ALL GONE in his lungs; the heart and the sternum are all clear and ALL OF HIS ORGANS ARE "NORMAL", including his lymph glands. Finally, in Jan.'04 Brian had a biopsy of the area where the mass had been. The biopsy slides were examined at the pathology lab where the procedure was performed, and then they sent the slides for confirmation to Emory University in Atlanta, Georgia to be reviewed by a specialist. Both labs confirmed it ... no cancer cells were found ... MY SON IS CANCER FREE! Isn't that amazing? What an incredible blessing! We didn't expect to hear such fabulous news after just ONE YEAR of taking Immunocal daily. I was expecting that we'd be fighting this battle a lot longer, so you can imagine how relieved we feel! From this point Brian will have follow up MRIs and labs (blood work, etc.) every 4 months so we can monitor his recovery.

As I write this (April 2004), Brian is 21 years old and will be 22 in July. It was just under 2 years ago, in May 2002, he was first diagnosed with a deadly stage IV cancer. He has his life in front of him again, thanks to Immunocal and the excellent medical care he received from many caring, talented doctors and nurses. Brian's primary physician, Dr. Raymond Dann, tells his patients: "Immunocal is the reason Brian is alive today." So naturally, he will stay on Immunocal for the rest of it! He is presently taking 3 packs daily, and I will keep him on that dose for a long time because he's going through a tremendous recovery process. After all, his body has been through quite a trauma, and his immune system needs to recover not only from the cancer, but the chemo and radiation as well. We just have to be patient, which can be hard, because Brian wants "to make up for lost time" and get on with his life. And naturally, I want that for him too.

In closing, I thank God for allowing Dr. Gustavo Bounous to make the discovery of a simple whey protein that helped the control mice in a clinical study to live longer than the ones that were not fed the specialized protein, even when the control mice were injected with cancer cells. I also thank God for giving my son his life back, when surely he was going to die from such a horribly aggressive cancer. I am so grateful that Betty had the courage to call to tell me what she knew, because she was an answer to my prayers. And I am also grateful to Immunotec Research for the opportunity to make a living working full time from my home, helping people regain their health while also helping those in my downline organization that are committed to increasing their income. What's not to like about that?

I look forward to an enjoyable future with this wellness company, Immunotec Research Ltd., and the pleasure of seeing my family and friends flourish. I sincerely hope you take the time to investigate how Immunocal can help you and all you know to improve their health as well!

Warm Regards, **Karen O'Handley**

Ingrid Cancer

Dear Leroy and Monika, Thank you for your e-mail. I had it on my mind, to write you, sorry it took me so long. How are you doing?

I am doing fine, health wise and other wise. Since I take the product, I noticed to **have more energy** and the **"unclean" skin problems in my face** (from taking the chemotherapy) are disappearing. Beginning of the month I had the **Chemo** and at that time the **Tumormarker** was on 4.2 and when X-ray was taken from my spine, they could not find any **cancerous** signs on it. In May I had in my lung a metastasis of the 4 to 7 cm and 4 others of 2.5 cm in diameter. Beginning of August the bone scan and the CT showed, that there is only one Metastasis of 1.5 cm and around 10 other tiny "objects" smaller as 0.5 cm, but it is not possible to find out, if these smaller "objects" are malignant or not. After the 6th of September, the doctor will have another test. But till then I will take the product and hopefully all readings of cancer may be of the past!

We are very happy about this news! Thanks to Jehovah, who gave to me the power beyond what is normal and all the good gifts in men, who helped me on the way of recovery.

With Christian love, **Ingrid**

Mary Levers Breast Cancer

December 1996 I was diagnosed with **breast cancer**. Luckily, I was operated on December 24th. January 6th I was given the pathologist's report and I would need to have *chemotherapy and radiotherapy*. My first chemo was on January 24 and I was to do 12 sessions. The doctor told me that I could have different reactions to the chemo like vomiting, nausea, hair loss, sores in my mouth, etc. To counteract I was to do 24 sessions of radiotherapy simultaneously. If there were any complications I'd have antibiotics prescribed. After checking me out and prescribing the antibiotics, Dr. Dowell introduced me to **Immunocal**. He explained that it would help my immune system and being a pro-anything natural, I became interested in this food supplement. Two days after my 10th chemo session I began taking **Immunocal**. Incredibly, I had already noticed a change in my system ... I was especially interested in Immunocal for its **detoxification** process since it would help my body eliminate the drugs. I had more **energy** than I have had in a long time and my body *recovered from chemo much quicker without any side effects!* This is definitely due to Immunocal. I continue to take Immunocal faithfully and continue to build up my strength and hope to be back to normal in a few months. **Immunocal has given me a better quality of life.**

Mary Levers

Breast Cancer

Quebecer Ivy-Marie is a very active thirty-seven year old **breast cancer survivor**. After undergoing her initial surgery, the pathologist's report suggested she undergo a dozen sessions of *chemotherapy and radiotherapy*. She experienced many side-effects, including profound weakness and fatigue - a new experience for her. After ten sessions of therapy and many visits to her doctor to treat side effects, she was put on 30 gm/day of the whey protein concentrate **Immunocal**. Her strength and sense of well being improved within a week and she tolerated her last session of chemotherapy with few side effects. She is back to her usual routine, and remains disease-free.

Susan Randall, on her "dance" with Breast Cancer.

I am an educator who was born on the banks of the English Channel; I currently reside in Western Quebec, Canada.

After 15 years of living in India, studying Yoga philosophy and meditation, I returned to Canada in 2001 to discover that I had an acute case of advanced glaucoma, and needed two eye surgeries. *Breast cancer followed.* My overwhelming conclusion is that, for whatever reason, my immune system had decreased its functioning to the point where it was no longer able to deal with the onslaughts of toxicity and aging. My introduction to **Immunocal** came at a time when I had just finished four months of **chemotherapy treatment** for the cancer. Surgery and radiation therapies were still to be experienced. I was amazed at the incredible sense of well-being that came along with the taking of the product, and was further convinced of its efficacy when I felt little fatigue during the days of radiation.

The surgery and radiation therapies had been for the Stage 3 tumor in my right breast. Although I had been diagnosed with 'ductal carcinoma in situ' in the left breast, I decided to not undergo the traditional treatment for this (mastectomy),

The people giving product or business opportunity testimonials on our web site or on other Immunotec materials reflect the actual experience of each individual, are anecdotal only, and may be atypical. but rather wait. Why? Because cancer is a systemic disease, and I wanted to firstly treat my system. This was done mainly through diet, along with supplementation of two to four pouches daily of **Immunocal**. I also used Immunotec's Skin Perfecting Cream every day on the suspect area. In December of 2003, one full year after taking Immunocal on a daily basis, I had another biopsy on that left side. The diagnosis was: "No malignancy identified, just soft, pink, adipose tissue." Yes!

At the same time, my eye-doctor calls my success with keeping glaucoma at bay, a "text-book case." My visual-field test results have improved, and my eye pressure remains normal.

Throughout my dance with cancer, I researched, investigated and tried many complementary therapies whilst embracing all the traditional approaches. ***Immunocal bridges the gap between the two avenues of healing.*** In February 2004, its reference is to be found in the Canadian Compendium of Pharmaceuticals and Specialties (CPS). At the same time, it is a totally natural product, the only side effects being improved health and a greater sense of wellness. It has become my daily health insurance.

I am impressed with the high quality of the Immunotec products and have no hesitation in recommending them all, but particularly **Immunocal** for anyone whose health is challenged in any way by the stresses of day-to-day living. I welcome any comments, and am available for consultation on any part of the process involved in the dance with breast cancer.

Sincerely, Susan Randall

Terminal Lymphoma

Edith Groom, Victoria, B.C., Canada January, 2004

I would like to share my story of how **Immunocal** has saved my life.

In November of 2001, at 83, I lost my husband, Howard, to cancer. In the next few months I became aware that I was losing weight, although I felt fine. By January, after successive checks with my doctor, he suggested I go for a few tests. A few tests included several weeks of ultrasounds, and biopsies of my liver, stomach, and bone marrow.

By April the results were in. **I had cancer (lymphoma)**. As my doctor put it, this can be like a raging lion within the body, but chemotherapy is very successful in knocking it back. By mid-August, after six treatments, I was in pretty bad shape with terminal lymphoma (Stage IV, rampant/wasting). The last scan still showed cancerous nodes on my abdomen and chest.

My grand-daughter was a great help to me, as I just didn't have the energy to do very much for myself. I had a walker by my bed, but couldn't even get out of bed to stand or use the commode.

In early September, Paul Rothe, suggested I try **Immunocal**. I took three packs per day, and by November, was feeling much better. I must have been better because I was able to host the family dinner for Christmas!

In March, when Paul made one of his calls to see how I was doing, I was able to tell him that I was almost back to my old self. My last scan was completely clear, and I didn't have to go for another checkup for three months!

Although I have only regained 20 of the 34 pounds I lost during my illness, I am doing really well. But, I am still taking two packs of Immunocal per day to keep the **cancer** from coming back.

If I hadn't taken Immunocal, the story would have been a lot different.

Edith

Fausta Magee Chronic Lymphocyte Leukemia (CLL)

After many months of feeling fatigued and getting many colds and infections I was finally diagnosed with CLL. A lot of good that did me as I was told that there is no cure. It is a progressive **leukemia** and that if I was fortunate enough to not get ill and keep my white blood count down there would be a cure within the next 10 years. My white blood count was increasing with each blood test every month so the *cancer was growing*. **This is all validated through my doctors by the way!** I also grew lumps on my neck and wore turtle necks and scarves during the summer to hide them as I did not want to worry my children. In September of 2003 I also developed a skin disorder on my right arm which I also tried my best to conceal. Living on antibiotics was not for me but what choice did I have? Every time I got infection my count would increase so had no choice but to take the drugs. I became very ill in June of 2004 and had given up. I made my funeral arrangements and put my affairs in order.

A good friend of mine from Ontario sent me 4 boxes of **Immunocal** in August of 2004...She was very firm that I needed to take 4 packages a day. The night before I received the package I had prayed to God for a miracle (My miracle arrived in the mail via my angel friend in Ontario.) Within a week of taking the product (3 - 10 gram packs per day) I had my life back! In six weeks my white blood count had gone down, and my lumps were getting smaller. It has now been 6 months of being on the product. I have no lumps, my right arm is looking like my arm again, my hair has a shine, my finger nails have no ridges and what can I say, I am delighted. I still have leukemia but who cares as long as I feel and look good. I am experiencing a nice quality of life and that is all that counts.

My new saying is "If I am going out, I am going out feeling good!" It is gratifying to have my quality of life back and who knows where it might go from here. As long as I take this GSH enhancer I feel great!

I share the information on Immunocal with everyone and hope that you do too!

Fausta Magee, British Columbia, Canada February, 2005

Cancer Throat/Neck Cancer in Stage D

This is what Immunocal has done for me.

In July of 99 I was diagnosed with **throat/neck cancer** in stage D, and given only a 20% chance of survival over 6 months. I had an operation on 1 SEP 99 and 33 days of radiation during the months of Nov and Dec of 99. I started taking **Immunocal** in Oct of 2000. I had my first follow up with the doctor in March of 2001 at which time the doctor stated that where the operation had taken place there was no cancer. However on the other side of my throat I had developed a new lump that was 3.0 cm in size.

I continued to take **Immunocal** and had my next visit in June 2001. The doctor stated that I was cancer free and the lump on the other side had shrunk in size to 2.5 cm. and that we would just watch it for a while. On my next visit Oct 2001 I was told by the doctor that I was cancer free and that the lump on the other side was gone. It is now June of 2002, I take Immunocal (2 packets a day) on a daily basis and I am still cancer free.

I am thoroughly convinced that I am cancer free this day due to the regular and continued use of Immunocal.

Immunocal also helps me to maintain a good and steady blood glucose reading, I average 70 to 130 on a steady basis, and that is excellent for a 100% insulin dependent diabetic, I also wear an insulin pump. May you take Immunocal and have the success with the products of Immunotec that I have had

Sincerely, **David Vaught**

Ovarian Cancer

Complaining of abdominal pains, **Louisa from Alberta** found out she had **ovarian cancer**. While awaiting surgery, she fell ill with a persistent cough and malaise which turned out to be a **metastasis** (spreading cancer) which had traveled to her lung. She ultimately needed pelvic surgery to relieve her discomfort, but decided not to undergo treatment for her lung metastasis. She started taking **Immunocal** and multivitamins daily and noticed a great improvement after several weeks. Four months later, repeat chest x-rays showed no increase in tumor size. Nine month later the radiographs revealed a decrease in tumor size. Louise continues to enjoy tending to her family and household.

Larry - Prostate Cancer

My name is Larry and I was diagnosed with **prostate cancer** in Dec 2001 with a Gleason score of 3+3. After 2 consultations with my urologist, I elected to go with the natural way of healing and managed to keep my PSA under control. In addition to my many natural supplements, my diet was 90% vegetarian. I continued to loose weight and lacked energy.

I was introduced to **Immunocal** 5 months ago and have been on 3 packages a day. To date, I have regained my normal weight, improved muscle mass, and am full of energy. My recent physical examination with my family doctor revealed a soft prostate and normal in size. I also take **Magistral twice a day for preventative purposes**. I owe my good feeling and mental attitude to this amazing product Immunocal. My golf game has never been better! My age is 65 going on 40!

Larry McArthur Red Deer, Alberta Canada

Franklin - Prostate Cancer

Franklin was a semi-retired **general practitioner** who at age 68 scored a PSA reading of over 8 micrograms/liter on a routine screening exam, suggesting a high possibility of **prostate cancer**. In continued tests, a urologist took a cystoscopic biopsy and confirmed the diagnosis. Four out of Franklin's six biopsy sites tested positive for high-grade tumor. For personal and practical reasons, Franklin delayed aggressive treatment and opted to take 30 grams/day of **Immunocal**, (3 pouches) a protein isolate that **raises glutathione levels**. Bimonthly PSA levels showed a gradual decline, his latest reading being 3.8 u/L. He is still being closely followed by his urologist, and his decision to undergo chemotherapy, radiotherapy or surgery will be deferred unless his PSA levels rise again.

Prostate Cancer

This is Norman's experience:

About two years ago, Norman became very ill with Congestive Heart Failure and Pneumonia. In the hospital they found **Prostate Cancer**. Norman could not walk 10 feet without being totally out of breath. With medication, and herbs, there was some improvement. During this time, our friends Cathy and Bob called and told us about **Immunocal**. I asked them to send it out as soon as they could. Norman started taking 3 envelopes a day and in a month he was getting up, going out in the yard doing things. When we went to the Doctor, Norman's PSA had dropped from 53 to 0.4. Today, he is not on any medication, but takes 2-3 envelopes of **Immunocal** a day, and is doing very well.

Sylvia's Dads Story of Cancer

Dear Sylvia,

I have just returned from my 6 monthly **catscan** and want to share the joy of a good report with you. As you know, I had my first major operation for my **gastric cancer and cancer of the esophagus** over 5 years ago. Unfortunately it re-appeared and re-appeared several more times and within the first 2 years I had 4 major operations.

You kept telling me to try **IMMUNOCAL** but I did not have confidence in this type of product. However, after 4 operations I had nothing to lose. My surgeon refused to operate again and suggested chemotherapy. I have seen side effects of this treatment and did not look forward to it. **I finally listened to you and started my daily IMMUNOCAL.**

Thank you for being so persistent.

The last 3 years I am now perfectly clear. The *chances of surviving this type of cancer are less than 5 percent* and the oncologists at the Vancouver Cancer Clinic call me the "**miracle patient**". I feel great and I wish to thank you for insisting on using **IMMUNOCAL**. When I finally mentioned this to the oncologists today, they wanted to obtain more details about the product. I you can send me some information, please do so. In the meantime - all I can say: Thank You!

Love, Dad

Stage Four Non-Hodgkin's Lymphoma

I wanted to let you know the good news that my father was **declared cancer free** this week. As you probably remember, he was diagnosed with **stage four non-Hodgkin's lymphoma** last year. As a 78 year old man, his prognosis was not particularly good. He had a sizable tumor in his throat close to his artery and another in his groin. When they did further tests they found one more under one arm. Because the tumors presented themselves on different sides of his body, the assumption was that the **cancer** was already throughout his system and was well established. The doctor's first concern was the size of the tumor in his throat which was threatening his artery to the brain. Surgery was required to remove a piece of it but the part closest to the artery had to be left behind. The second concern was not knowing if dad could withstand the potency of chemotherapy that would be required to *fight this type of cancer*.

We are so grateful that we knew about Immunocal's patents as a chemotherapy agent and its moderating effects on the side effects of chemotherapy. We called Mr. Molson at the company to determine doses and got dad started on 6 packs a day immediately. The oncologist said he was too busy to really study the material about **Immunocal** that we took to him, but said that it couldn't hurt. Dad has been through four or five cycles of treatments over the last few months. He never felt ill or nauseated at all. The only side effects he experienced were some mouth sores at various times in the cycles. Even though each cycle made him weaker, his over all **side effects were very minimal** and the doctor was extremely pleased with the way that he was tolerating the treatments.

Throughout the last few months, the *doctor grew increasingly more and more optimistic* as he watched dad's progress. And last week, after a CAT scan, dad was told that there was **no cancer to be found in his body!!** He still will go through a few more rounds of chemo, but at this time he has beat it! We are praising God for His mercy and so very grateful that there are tools like **Immunocal** to be useful at this time in history! Herb, you won't be surprised to know that *the doctor would like some Immunocal information now* . I guess he's seen enough that he's willing to take the time to give it a better look! Thank you again for your persistence in getting us to take **Immunocal** seriously - you might have just saved a life!

Love to you, Pat
